A histogram showing the distribution of predicted life satisfaction. The x-axis is labeled 'Predicted life satisfaction' and has tick marks at -50, 0, and 50. The distribution is a very narrow, tall peak centered at 0, with most of the data points clustered between -10 and 10. The bars are dark blue.

A density plot showing the distribution of predicted life satisfaction. The x-axis is labeled 'Predicted life satisfaction' and ranges from approximately -75 to 75, with major ticks at -50, 0, and 50. The y-axis is labeled 'Density' and ranges from 0 to 0.0015, with major ticks at 0, 0.0005, 0.001, and 0.0015. The distribution is unimodal and centered at 0, with a peak density of approximately 0.0015. The data is represented by a dark blue histogram with a light blue density curve overlaid.

A histogram showing the density of predicted life satisfaction scores. The x-axis is labeled 'Predicted life satisfaction' and ranges from -50 to 50, with major ticks at -50, 0, and 50. The y-axis is labeled 'Density'. The distribution is highly concentrated around a value of 10, with a sharp peak reaching a density of approximately 0.00015. The data is represented by dark blue vertical bars.
